HOW THE AUDIT WORKS

1. On-Site Packaging Review

We assess how packaging is actually used in your operation, including:

- Packaging lines and workflows
- Materials used (boxes, films, tape, pallet wrap)
- Packaging equipment and dispensers
- Damage records and waste levels

2. Sustainability & Compliance Check

We review your packaging against current regulations and sustainability goals:

- Recyclability and recycled content
- Opportunities to simplify materials
- Options to reduce EPR costs
- Carbon and transport efficiencies

3. True Cost Analysis

We look beyond the unit price to understand the real cost of packaging, including:

- Labour time
- Storage and logistics
- Damage and rework
- Waste disposal and EPR fees

4. Clear Recommendations

You receive a simple report outlining:

- What's working well
- Where improvements can be made
- Expected cost savings
- Environmental benefits
- Where appropriate we can also provide samples or prototypes.

BE A PARTNER OF CHOICE.
